keep.

Keep protects the inside

Keep Safe System gives people and environments increased protection against intrusion, blasting, fire and shelling.

We were inspired by the car industry and their long history of using force absorbing elements to increase safety and save lives. Keep has developed a unique solution that protects the inside by preventing the window and frame from collapsing.

With Keep's fastening system, it is possible to use thinner glass and manufacture larger sections with maintained security up to the highest security level. It means both design gains and cost benefits for architects, property owners, builders and construction companies.

When security matters

Keep safe system for protection in public spaces:

- airports
- alarm centres
- banks and post offices
- department stores and shops
- embassies
- government buildings
- police stations
- metro stations
- military premises
- school buildings

Main areas of use

- Safe and secure facades, windows and doors
- Glass facades

Advantages

- Will revolutionize the market for steel frame doors and windows
- Ability to use thinner glass and maintaining safety up to the highest security level
- Ability to combine fire, blast, bullet and attack protection in one system
- Withstands significantly higher stresses than similar products
- Higher security – lower costs
- Substantial esthetic design possibilities
- Patent in Sweden and the U.S. and worldwide patent pending
- Certified and tested

Tests and certifications

Tests and calculations show that we can handle blasting, shelling, attack, fire and smash and grab in the same system and at a higher level of security.

For example, the system manages explosive class level 3, EXR3, with glass classified for level 1, EXR1 and the highest level EXR5 with glass classified for level 3, EXR3.

We have also past a fire pre-test for EW60.

Keep support

Keep offers a total solution that includes everything from consulting and pre-engineering to manufacturing. Based on customer needs Keep delivers steel sections with glass, assembly and installation and aftermarket support.
